

## RAM BHAJAN MISHRA

Senior DevOps Engineer  
Commonwealth Bank

(+91) 9453038531  
[rbm897@gmail.com](mailto:rbm897@gmail.com)  
[linkedin.com/in/rbm897](https://www.linkedin.com/in/rbm897)

### Professional Summary:

Outcome-driven Senior DevOps and Cloud Platform Engineer with 8+ years of experience in designing, building, and maintaining scalable cloud infrastructure and robust CI/CD pipelines. Proven expertise in AWS, Kubernetes, Terraform, Docker, and automation scripting using Go and Python. Demonstrated success in infrastructure provisioning, security hardening, cloud cost optimization, and end-to-end observability implementation across enterprise financial environments.

### Experience: (8+ years)

#### Senior DevOps Engineer

#### [Commonwealth Bank Of Australia](#)

Dec 2024 - Present

- **Provided DevOps technical leadership** and guided offshore team while architecting the Service Domain Portal from the ground up as a Founding DevOps Engineer for CBA's Enterprise Transformation Program, establishing core CI/CD automation pipelines that were subsequently reused in the Direct Debit Orchestration project under the Payments Domain.
- **Created AI-driven dashboards:** Worked closely with executive-level leaders to understand their requirements and fulfilled them using AI-enabled workflows (leveraging Claude and autonomous agents) to track the progress of the enterprise transformation program.
- **Provisioned and managed** enterprise AWS infrastructure resources including EKS, RDS, S3, ALB, and NLB via IaC.
- **Deployed and customized** open-source platforms—including Keycloak, Airflow, and PgAdmin—to align with organizational technology and compliance standards.
- **Built an end-to-end observability stack** (Prometheus, Grafana, OpenTelemetry) with Teams alerting and health dashboards; expanded the platform into the Payments domain, deploying a new payment orchestration service
- **Hardened platform security** - vulnerability remediation, production release process standardisation
- **Key Skills:** Go, Python, Shell Scripting, AWS, ArgoCD, Kubernetes, Docker, Terraform, Hashicorp Vault, Helm, Helmfile, Github Actions, Kyverno, Airflow, Keycloak

#### Cloud Platform Engineer

#### [Standard Chartered Nexus](#)

July 2021 - Dec 2024

- **Banking-as-a-Service (BaaS) Engineering:** Worked extensively on Standard Chartered's BaaS platform Nexus, which later spun off as [audax.io](#), delivering scalable cloud solutions and infrastructure automation for embedded banking products.
- **Engineered reusable AWS Terraform modules**, empowering engineering teams to declaratively provision resources like RDS, OpenSearch, EKS, and S3 using YAML configurations.
- **Developed an internal deployment tool** capable of orchestrating multiple Helm releases within a single pipeline execution, reducing net-new environment setup time to 1–2 hours.
- **Developed an application** to manage network related configuration. This includes any port opening between two systems and it's tracked in code, which enhances the audit and review process.
- **Cost Optimization:** Developed an application to manage/strict the environment availability for development hours only. This empowered the Dev teams to scale up the environment based on their requirement. This helped us reduce our environment running cost by 40% . This tool requires the configuration to be updated in YAML format.
- **Upgraded AWS EKS Clusters** from 1.21 to 1.22 (In-place upgrade) and then 1.22 to 1.25 (Blue - Green approach).
- **Application Migration:** Helped to migrate the whole application stack from one region to another region in AWS, to achieve regulatory compliance. This was lift and shift activity with Data migration.
- **Implemented Cloud Controls:** Remediated critical infrastructure security vulnerabilities identified during penetration testing to satisfy strict compliance requirements.

- **Established logging framework** utilizing Fluent-bit, OpenSearch, and OpenSearch Dashboards to stream telemetry from distributed microservices to a central observability platform.
- **Managed Multiple Environments:** Oversaw and maintain 10+ diverse environments, ensuring high availability and performance for development, staging, and production setups.
- **Automated certificate lifecycle management:** Managed SSL/TLS procurement, installation, renewal, and troubleshooting to ensure secure communication channels across all endpoints.
- **Infrastructure Provisioning via code:** Created CD pipelines to provision cloud resources using Terraform and Crossplane. This helped in enhancing deployment speed and consistency.
- **CI/CD Pipeline Creation:** Designed and implemented Continuous Integration and Continuous Deployment (CI/CD) pipelines with Jenkins, ArgoCD, Azure DevOps, streamlining application delivery and improving deployment frequency.
- **Network Configuration Management:** Configured and managed network settings, including firewalls, load balancers, and VPNs, to optimize performance and maintain secure access controls.
- **Metrics Management:** Implemented centralized monitoring solutions using tools like Prometheus and Grafana, enabling proactive issue detection and performance tuning.
- **Key Skills:** Go, Python, Shell Scripting, Postgres, Cassandra, AWS, Azure, Sumologic, Kibana, Solace, Jenkins, ArgoCD, Kubernetes, Docker, Terraform, Crossplane, Opensearch, Helm, ADO

## Full Stack Developer

[Mach-X Private Limited](#)

Feb 2020 – June 2021

- **Developed and deployed** full-stack web applications across two distinct environments on AWS EC2, running services as Docker containers behind a load balancer to ensure high availability and smooth deployment, while implementing responsive React interfaces and robust RESTful APIs in Node.js and Flask.
- **Engineered asynchronous task workers** using Python polling AWS SQS queues, and built an automated financial PDF parsing engine to transform unstructured statements into structured Excel datasets, feeding a predictive machine learning model that enabled investors to accurately assess risk and drive informed financial decisions.
- **Technology Used :** React JS, Redux, Node JS, Express JS, Python, Flask, R, MySQL, AWS EC2, Load balancers, SQS, SNS and Docker

## Assistant System Engineer

[TCS](#)

July 2018 – Jan 2020

- Engineered automated data pipelines for client Honeywell's enterprise expense reimbursement process, streamlining financial data flow.
- Eliminated human errors in critical financial operations by fully automating manual workflows using Python and shell scripting.
- **Technology Used :** Python, Oracle DB, SQL, Shell Scripting

## Projects:

- **Sahayak:** An android application that help to remotely access your phone just by sending SMS from any other phone, for example, fetching contact details, changing audio settings, getting location etc
  - **Reviewttr:** The project aims to check the polarity of tweets about a product as twitter users publish their feedback.
- Technologies used:** Natural Language Processing, Python, Flask, Tweepy and Textblob.

## Achievements & Certifications:

- AWS Certified Solutions Architect – Associate (Active)
- Received Codility Silver Certificate (2 Times)

## Technical Skills & Interests:

- Programming Languages Go, JavaScript, Python, C, C++, Shell Scripting, Java
- Database Management Systems Postgres, MySQL, Cassandra, Oracle, MongoDB
- Cloud Services AWS, Azure
- CI/CD & Orchestration Tools Jenkins, ArgoCD, Kubernetes, Docker
- Infrastructure Provisioning tools Terraform, Crossplane
- Tools, Libraries & Frameworks SQS, Solace, Opensearch, Sumologic, Kibana, Helm, Crossplane, React, Node, Express, Git, SVN, Jira, Confluence, ADO, Agile
- Soft Skills Teamwork and collaboration with other downstream teams.

## Education :

**Medicaps Institute Of Science & Technology, Indore (RGPV, Bhopal)**

**Aug 2014 - May 2018**

- B.E. in Computer Science and Engineering, May 2018. CGPA 7.73
- Undergraduate Coursework: Algorithms; Data Structures; Operating Systems; Database; OOPS.
