Experience: (7+ years)

Senior DevOps Engineer

[Commonwealth Bank Of Australia](#)

Dec 2024 - Present

- **CI/CD Pipeline:** Setting up CI/CD pipeline to manage deployment for internal tools.
- **Deploy open source** services with some customizations as per the organisational tech and security standard.
- **Implemented observability** using prometheus, grafana, and open-telemetry services like jaegar.
- **Key Skills:** Go, Python, Shell Scripting, AWS, ArgoCD, Kubernetes, Docker, Terraform, Crossplane, Hashicorp Vault, Helm, Helmfile, Github Actions

Cloud Platform Engineer

[Standard Chartered Nexus](#)

July 2021 - Dec 2024

- **Created Modules for AWS Services**, which enabled teams to provision/create AWS services in declarative approach via code, by defining their requirement in YAML format. This covered services like RDS, Opensearch, EKS, EKS NodeGroups, S3 buckets, etc.
- **Developed and maintained an internal tool** to deploy multiple Helm releases using a single pipeline in one run, based on given filters. This tool has the capability to spin up a new environment in 1-2 hours.
- **Developed an application** to manage network related configuration. This includes any port opening between two systems and it's tracked in code, which enhances the audit and review process.
- **Cost Optimization:** Developed an application to manage/strict the environment availability for development hours only. This empowered the Dev teams to scale up the environment based on their requirement. This helped us reduce our environment running cost by 40% . This tool requires the configuration to be updated in YAML format.
- **Upgraded AWS EKS Clusters** from 1.21 to 1.22 (In-place upgrade) and then 1.22 to 1.25 (Blue - Green approach).
- **Application Migration:** Helped to migrate the whole application stack from one region to another region in AWS, to achieve regulatory compliance. This was lift and shift activity with Data migration.
- **Implement Cloud with Control:** Helped remediate the security finding related to infrastructure which was flagged during penetration testing.
- **Implemented logging framework** to push logs from services to the central observability platform. This includes fluent-bit, Opensearch, Opensearch Dashboards etc
- **Managed Multiple Environments:** Oversaw and maintain 10+ diverse environments, ensuring high availability and performance for development, staging, and production setups.
- **Certificate Management:** Handled lifecycle of SSL/TLS certificates, including procurement, installation, renewal, and troubleshooting to ensure secure communications and compliance.
- **Infrastructure Provisioning via code:** Created CD pipelines to provision cloud resources using Terraform and Crossplane. This helped in enhancing deployment speed and consistency.
- **CI/CD Pipeline Creation:** Designed and implemented Continuous Integration and Continuous Deployment (CI/CD) pipelines with Jenkins, ArgoCD, Azure DevOps, streamlining application delivery and improving deployment frequency.
- **Network Configuration Management:** Configured and managed network settings, including firewalls, load balancers, and VPNs, to optimize performance and maintain secure access controls.
- **Metrics Management:** Implemented centralized monitoring solutions using tools like Prometheus and Grafana, enabling proactive issue detection and performance tuning.
- **Key Skills:** Go, Python, Shell Scripting, Postgres, Cassandra, AWS, Azure, Sumologic, Kibana, Solace, Jenkins, ArgoCD, Kubernetes, Docker, Terraform, Crossplane, Opensearch, Helm, ADO

Full Stack Developer

[Mach-X Private Limited](#)

Feb 2020 – June 2021

- Developed the web user interface and the APIs, powering the application. This consists of one frontend application in React, one backend in Node and another in Python with Flask. This also consists of some

asynchronous task which is handled by two separate Python applications, which is polling to the given SQS.

- Created parser to convert formatted PDF files into Excel. These pdf files are financial statements, which are then fed to a machine learning model to predict the risk against the given statements, which helps investors to make informed decisions.
- **Technology Used** : React JS, Redux, Node JS, Express JS, Python, Flask, R, MySQL, AWS EC2, Load balancers, SQS, SNS and Docker

Assistant System Engineer

TCS

July 2018 – Jan 2020

- Re-factored codebase and improved process.
- Automated the existing manual processes. It helped in eliminating manual/human error in the critical financial job.
- **Technology Used** : Python, Oracle DB, SQL, Shell scripting

Industrial Training

Zensar Technologies

- CRUD application. It involves some authentication and database connectivity.
- **Technologies used**: Java and Oracle DBMS

Projects:

- **Sahayak**: An android application that help to remotely access your phone just by sending SMS from any other phone, for example, fetching contact details, changing audio settings, getting location etc
 - **Reviewttr**: The project aims to check the polarity of tweets about a product as twitter users publish their feedback.
- Technologies used**: Natural Language Processing, Python, Flask, Tweepy and Textblob.

Achievements & Certifications:

- AWS Certified Solutions Architect - Associate (Mar 2023 - Mar 2026)
- Received Codility Silver Certificate (2 Times)

Technical Skills & Interests:

- | | |
|-------------------------------------|--|
| • Programming Languages | Go, JavaScript, Python, C, C++, Shell Scripting, Java |
| • Database Management Systems | Postgres, MySQL, Cassandra, Oracle, MongoDB |
| • Cloud Services | AWS, Azure |
| • CI/CD & Orchestration Tools | Jenkins, ArgoCD, Kubernetes, Docker |
| • Infrastructure Provisioning tools | Terraform, Crossplane |
| • Tools, Libraries & Frameworks | SQS, Solace, Opensearch, Sumologic, Kibana, Helm, Crossplane, React, Node, Express, Git, SVN, Jira, Confluence, ADO, Agile |
| • Soft Skills | Teamwork and collaboration with other downstream teams. |

Education :

Medicaps Institute Of Science & Technology, Indore (RGPV, Bhopal)

Aug 2014 - May 2018

- B.E. in Computer Science and Engineering, May 2018. CGPA 7.73
- Undergraduate Coursework: Algorithms; Data Structures; Operating Systems; Database; OOPS.
